

Innovation safari at the EUREF campus on 26 October 2019

Introductory Overview Tour

Familiarize yourself with the intelligent city of tomorrow, already here today in this unique center for innovation and projects of the future. On this tour you'll get an introduction to the site and the background of its development, plus the overarching idea and vision of the campus with its resident institutions, companies and projects. This will give you a grasp of the way the campus works, and is structured. The stations along the tour look at the main themes of the campus, like connected mobility, intelligent energy provisioning, climate change reduction, and energy efficient construction.

EUREF-Campus Energy Lab Tour

The Energy and provisioning concept at EUREF Campus is based on the guiding principle that the necessary power is generated as carbon neutrally as possible, and used in the most effective way. As you explore the GASAG Solution Plus Energiewerkstatt, you'll see pioneering solutions and technologies up close and in operation, with our selection of different tours. Complex processes are demystified with multimedia enhanced displays. Biogas fuelled combined heat and power units ("Blockheizkraftwerke" or BHKW) supply all buildings on site with carbon neutral energy, and Germany's first Power-to-Heat/Power-to-Cool installation regulates the temperature indoors across the whole campus. Artificial intelligence allows the facility to constantly learn and improve itself.

Test driving Electric Vehicles

eMobility can be experienced up close on the EUREF-Campus by test driving e-vehicles of all kinds. Whether it's an electric scooter or Segway - with this active addition to your EUREF-Campus program, you will get to know the future of mobility.

Garamantis GmbH

Startup Garamantis shapes interactive installations and Virtual Reality experiences as a trade-fair highlight for showrooms and exhibitions, providing information in an intuitive way. State-of-the-art presentation devices like multi-touch tables, interactive projections and VR installations dissolve barriers to absorbing knowledge, and inspire curiosity. In Garamantis' in-house showroom you can experience their product innovations up close and try them out yourself. Immerse yourself in the virtual world with a Virtual Reality headset, or check out the interactive showcase, that through the multitouch surface allows you to control the exhibits within. As a partner of Ars Electronica, Garamantis implements projects all over the world for companies like SAP, Volkswagen and the European Space Agency.
